COR®BON

2006 Catalog

Glaser

SAAMI MEMBER

To our family of customers,

Family you say? Yes, we consider all our customers family and we recognize that you deserve to be treated like such from our customer support to our premium engineered products. When you purchase Cor-Bon/Glaser premium ammunition you can rest assured that it will perform to your highest expectations. We have researched and use only the finest quality components in the industry from respected companies like Sierra, Barnes, Swift, Leadhead Bullets and Starline Brass. Most of our bullets are made exclusively to our specs. We firmly believe that our quality control is second to none.

New this year is our Premium line of DPX Rifle hunting ammunition. You might be asking yourself, why did it take over twenty years for Cor-Bon/Glaser to produce a line of Rifle Ammunition? Well, frankly, we could not find a big game bullet to satisfy our high standards, until now. We have been waiting for the perfect hunting bullet to associate our name with, and finally found it! The Barnes Triple Shock. It gives deep penetration, 100% weight retention and unlike most "super premium" bullets, it's "super accurate". So, the next time you get ready to go on that hunt of a lifetime, pick up a box of COR®BON'S DPX Rifle ammo, featuring what I feel is the ultimate big game bullet.

By the way, If you want to get the best performance out of your "pet rifle", give my son Pete Jr. a call. He is currently scheduling custom load developments. Pete has the expertise to design the perfect load for that special rifle that doesn't quite shoot as good as you would like it to. He can formulate a perfect load that will shoot under an inch and will put game down for good with one well placed shot.

In parting, Our family would like to sincerely thank your family for your continued support of our business the past 24 years, and wish you a safe and successful year.

Good Shooting!

Peter R. Pi Sr.
President

COR®BON's research and development team have designed an environmentally friendly line of ammunition, featuring a solid copper projectile....

COR®BON products have earned a distinctive reputation in the industry with our high energy JHP ammuniton. Being consistent with this standing, we have combined the higher energy in our new DPX line along with its deeper penetration to make this the optimum load for Law Enforcement, as well as Civilian use.
DPX offers impressive expansion and deeper penetration from the solid copper Barnes X Bullet and retains 100% of its weight even when shot through barriers such as clothing and steel. The permanent crush cavity is considerably larger than a typical JHP due to deeper penetration.

13 inches of penetration

DPX HUNTER

DPX Hunter is our line of premium hunting ammunition that utilizes the Barnes solid copper hollow point bullets. The bullets used in these loads assure consistent expansion combined with deeper penetration. Weight retention is 100%, even after breaking heavy bone.

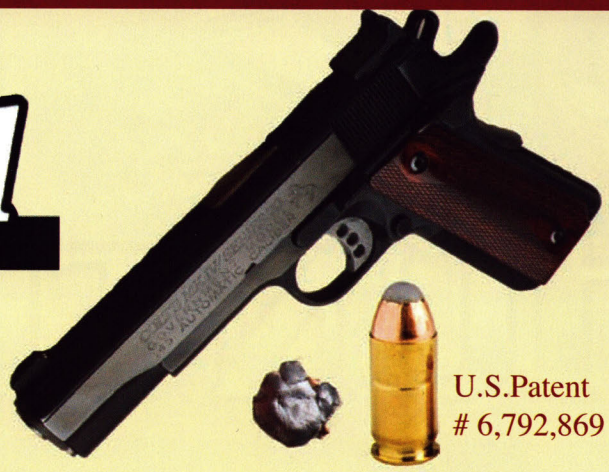
Pow'R Ball

Premium Self-Defense Ammunition

Glaser Safety Slug



U.S.Patent
6,792,869

Glaser's patented Pow R' Ball round was originally designed to enhance feeding in auto pistols. The jacketed bullets lead core is shaped into a specifically designed cavity that promotes deep penetration and high weight retention. We then capped it with a polymer ball to give it the feed profile of a round nosed bullet. Feeding is 100% in even the most finicky pistols. The polymer ball also keeps the bullet from getting clogged with clothing, the reason most hollowpoints fail to expand. Expansion is also slower, more controlled, enhancing weight retention.This bullet design gives excellent expansion and better penetration than a traditional jacketed hollowpoint with the feed reliability of hardball. This ammunition will give you confidence and peace of mind knowing you can count on it in a critical situation.

- Polymer Ball Capped
- Enhanced Feeding
- Excellent Performance
- Penetration
- High Velocity
- Reduced Recoil

The Future Now.

Glaser Safety Slug®

For over 30 years, Glaser Safety Slug has been the perfect choice for use in populated, urban areas. Glaser's composite design uses a special thin-wall jacket, and a precision compressed lead shot core with a soft polymer tip. This construction provides optimum balance between penetration and fragmentation. The round nose profile guarantees feeding reliability. Stopping power is maximized by the complete dispersal of the bullet energy into the intended target with immediate shock and trauma. This rapid fragmentation delivers the energy to a large area. Reduced recoil allows a fast recovery for follow up shots if neccessary. We feel that this makes Glaser the best choice for defensive situations.

Glaser Blue penetrates 5-7" in *IWBA protocol testing, using #12 shot compressed into a nearly solid form. Glaser Blue is suggested for use in warmer climate areas where lighter clothing will not effect penetration.

Glaser Silver offers 8-10" of penetration in *IWBA protocol testing. It is produced with #6 shot. Glaser Silver is suggested for use in colder climate areas where heavy clothing or jackets require deeper penetration. Both Glaser Silver and Blue will perform excellent in any defensive situation. It is always important to know what is behind your target; but in worse case scenarios Glaser's are the best for reducing the richocet and over penetration.

*** Internatinonal Wound Ballistics Association Protocol-10% ordinance gelatin covered with 4 layers of denim**

Features

- **Exceptional Accuracy**
- **High Energy**
- **Increased Stopping Power**
- **Reduced Recoil**
- **Safe to use in any appropriately chambered firearm**
- **Ricochet minimized**
- **Over penetration minimized**
- **Compressed Core**
- **Maximum Fragmentation**

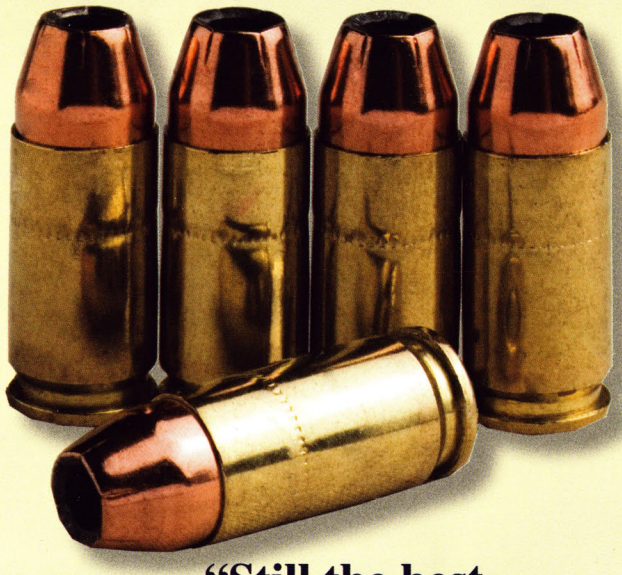
Glaser Blue utilizes #12 shot compressed into a nearly solid form. The Glaser Blue produces immediate energy dispersal into the target, reducing the possibility of over penetration and creating abrupt stopping power. The numerous projectiles expand outward generating an effective wound cavity and creating a secondary stretch cavity.

Glaser Silver is produced with # 6 shot. With the Silver load, you get much larger segments: deeper penetration and controlled energy release.
***Glaser Silver is not available in all calibers.

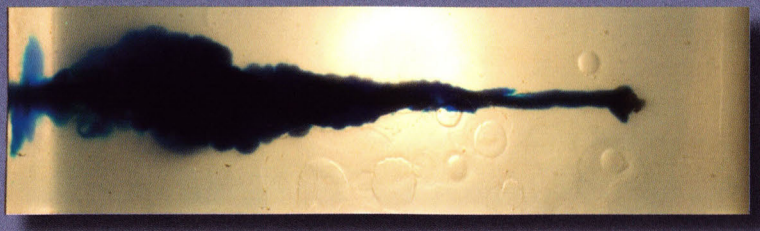
COR®BON Traditional Jacketed Hollowpoint



COR®BON's traditional jacketed hollowpoint ammunition made its reputation with "High Velocity" ammunition. This high velocity combined with our exclusively designed jacketed hollowpoint bullets creates a very effective self defense load. Penetration and expansion in ballistic gelatin is excellent. With depth of penetration generally varying from 9-12 inches, while expanison may range from to 11/2 to 2 times original bullet diameter depending on caliber.

At COR®BON, we still believe that velocity is king! Higher energies enhance bullet performance and increase its Stopping Power!

"Still the best conventional Jacketed Hollowpoint"



357 SIG 125 gr. JHP 12 inches of penetration in 10% ordinance gelatin

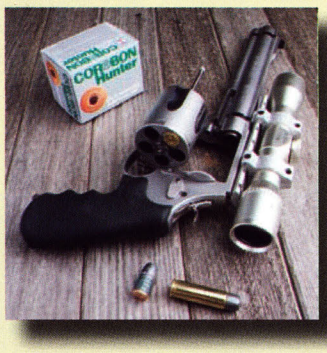
COR®BON Hunting Ammunition



COR®BON got it's start making custom hunting ammunition for hunters going to Africa to shoot really big game.
COR®BON bonded core soft point bullets are designed to retain their weight and stay together. Deep penetrating, along with expansion are the key to excellent performance in large game.
COR®BON's Penetrator and Hard Cast lead loads are designed for large tough skinned, heavy boned game. A heavy full jacket is used with a hard linotype lead core for the Penetrator loads. The Hard Cast load is made from a hard linotype lead with a proven flat LBT nose design. These loads cause a through and through hole, even breaking the heaviest bone. Our customers have taken game as big as Cape Buffalo and Rhinos!

Cowboy Action

The U.S. Cavalry Black Powder Ammunition was developed with the traditions of the Old West in mind. U.S. Cavalry reproduction ammunition is loaded with modern black powder to give the realistic smoke and kaboom of the Old West. Modern black powder reduces fouling and the corrosive effects of sulphur based charcoal powders. Yesteryear's standard can be today's standard with COR®BON's Cowboy Action loads.

Load Development

COR®BON CUSTOM LOADS

Rifles: $249.00
Pistols:$159.00

Loaded Ammunition is available for both rifles and pistols at an additional cost.

Our excellent professional research and developement department will find the best tailored load for your rifle or pistol. We use state of the art equipment to ensure your gun obtains peak velocity and supreme accuracy. This is a custom service done specifically for your gun. COR®BON Customs clientele will also receive test targets & ballistic drop charts out to 300 yards.
